

C606

High Precision RTK

Military-grade processing technology and complete electromagnetic compatibility and shielding technology to minimize electromagnetic interference in the system. It is full function with big battery (8.4V-2*6800mAh) can work up to 13 hours, OLED display. Another highlight point is Built-in communication module can receive RTCM, CMR, CMR+, SCMRx and other differential data formats, compatible with the mainstream CORS system on the market

Tilt IMU Sensor

With tilt measurement function

5W radio

Built-in 5w radio, the role of the distance up to 10km

OTG function

Support OTG function U disk directly into the receiver, extremely convenient for static data copy and replication

Wifi Hotspot

WiFi hotspot technology, the host can connect any device with WiFi (including cell phone hotspot, router) for differential data transmission

Patented High-precision

Unique patented high-precision wide range offset measurement technology

4G module

Unique high gain 4G built-in antenna with SIM card without external 4G antenna plugging

Smart power control

Intelligent power monitoring technology dynamically adjusts system power consumption
